SUMMARY

Results-driven Game System and Tool Programmer with extensive expertise in creating development solutions for the gaming industry. Demonstrated proficiency in Unity development with six years of comprehensive experience, advanced programming skills in C# and JavaScript, and specialized knowledge in developing game systems, development tools, and multiplayer gaming experiences. Committed to open source development and delivering efficient, scalable solutions that enhance productivity within game development teams. Proven track record in collaborative environments with strong technical leadership capabilities and a passion for innovative problem-solving in interactive entertainment.

EDUCATION

YouTube Learning Platform

Acquired comprehensive theoretical foundations through diverse educational content covering wide spectrum of programming concepts, game development methodologies, and software engineering principles. Developed adaptability skills by learning from multiple teaching styles and approaches to complex technical subjects.

Online Courses and Structured Learning

Completed specialized certification programs focusing on specific technical competencies including JavaScript algorithms, data structures, and multiple programming languages. Challenged by problem solving questions that provided practical application of theoretical knowledge in real-world development scenarios.

Self-Directed Learning and Experimentation

Developed expertise through independent research, experimental programming projects, and iterative learning from development challenges. Cultivated problem-solving abilities through hands-on experience with various technologies, debugging complex systems, and continuous skill advancement through project-based learning.

CERTIFICATIONS

Language Proficiency

IELTS Academic Examination – Score: 6/9

Technology Fundamentals – Certificate ID: CC-49YAACNH – Link (Clickable)

EXPERIENCE

Discord Bot Developer – SGN Company September 2022 – March 2024

Remote Position (1 Year, 7 Months)

Company Links Page: links.saudigamenews.com

* Developed and maintained Discord bot applications using modern programming frameworks and API integration techniques.
* Collaborated with cross-functional teams to implement automated solutions that enhanced community engagement and operational efficiency.
* Designed scalable bot architectures capable of handling high-volume user interactions while maintaining optimal performance standards.
* Implemented comprehensive testing protocols and deployment strategies for reliable service delivery in production environments.

Technical Team Leadership

Led development teams in collaborative game development projects, coordinating technical tasks, establishing development timelines, and ensuring successful project milestone completion through effective resource management and strategic planning.

Game Jam Participation

Active contributor in competitive game development events, demonstrating ability to create functional gaming experiences under stringent time constraints both as individual contributor and collaborative team member.

Package Development and Publishing
Experienced in developing, publishing, and maintaining packages and tools for community distribution, focusing on creating solutions that enhance developer productivity and workflow efficiency.

Developer Tool Creation
Have been asked asked to create development tools for various game developors multiple times, focusing on abstracting complex systems into user-friendly interfaces and efficient workflows.

PROJECTS

Unity Advanced System
Comprehensive architecture system replacing Unity's GameObject model with composition-based framework utilizing Controllers, Systems, and Workers.
Technologies: Unity, C#, Software Architecture, Component Design
* Architected and implemented advanced system design to enhance Unity's default GameObject architecture for improved development workflows.
* Created modular composition-based framework consisting of Controllers, Systems, and Workers components for superior code organization and maintainability.
* Developed extensive library of reusable components that significantly enhance game development workflow efficiency and long-term project maintainability.

Simple Timers
Lightweight timer library designed for Unity development environments.
Technologies: Unity, C#, API Development, Performance Optimization
* Developed comprehensive timer library with intuitive API design for common timing operations in game development workflows.
* Implemented performance optimization strategies and memory efficiency protocols suitable for production gaming environments.
* Created extensive documentation and usage examples to facilitate adoption by development community.

Tool Visualization in Phaser – Project (Clickable) – Source (Clickable) June 2024
Interactive web-based visualization platform for game system development and educational purposes.
Technologies: JavaScript, Phaser Framework, Web Development, Interactive Visualization
* Developed interactive web-based game system visualizations utilizing Phaser framework for educational and prototyping purposes.
* Created comprehensive educational tools for understanding game development concepts, system architectures, and programming methodologies.
* Implemented real-time system demonstrations suitable for learning environments and rapid prototyping workflows.

Coin Effects Tools – Project (Clickable) – Source (Clickable) March 2025
Specialized development tools for creating appealing coin collection and currency effect systems.
Technologies: Unity, Tool Development, Performance Optimization, Mobile Development
* Developed specialized tools for creating engaging coin collection effects and currency systems suitable for various game genres.
* Created comprehensive library of reusable components for common monetization and reward system implementations.
* Focused on performance optimization strategies specifically designed for mobile and web game deployment environments.

Grid Horror – Project (Clickable) – Source (Clickable) February 2025
Atmospheric horror game featuring procedurally generated environments and tension-building gameplay mechanics.
Technologies: Procedural Generation, Game Design, Horror Mechanics, Algorithm Development
* Developed atmospheric horror game with focus on procedural content generation algorithms for varied gameplay experiences.
* Implemented sophisticated grid-based map generation system ensuring balanced difficulty and engaging exploration mechanics.
* Created tension-building gameplay mechanics and horror-specific design elements for immersive player experience.

TicTacToe With Odin & SDL2 – Project (Clickable) – Source (Clickable) February 2025
Classic game implementation utilizing modern systems programming language with direct graphics library integration.
Technologies: Odin Programming Language, SDL2, Low-level Programming, Systems Development
* Explored modern systems programming language Odin for game development applications and performance optimization.
* Implemented direct SDL2 integration for graphics rendering and input handling with efficient resource management.
* Created clean, optimized code demonstrating low-level game programming concepts and system-level development practices.

Chicken Out – Project (Clickable) June 2021

Online multiplayer fighting game featuring innovative rock-paper-scissors combat mechanics with strategic powerup systems.
Technologies: Unity, C#, Networking, Multiplayer Architecture

* Developed real-time multiplayer fighting game supporting four concurrent players with stable network architecture and low-latency gameplay.
* Implemented innovative rock-paper-scissors combat mechanics with diverse weapon systems and balanced competitive gameplay elements.
* Created comprehensive powerup system with game balancing algorithms to ensure competitive multiplayer experience.

Village Warriors – Project (Clickable) April 2021

Comprehensive RPG adventure game featuring sophisticated turn-based combat system and character progression mechanics.
Technologies: Unity, C#, RPG Systems, Game Design

* Designed and implemented comprehensive RPG mechanics including character progression systems, inventory management, and statistical advancement.
* Created sophisticated turn-based combat system with strategic depth, variety in tactical options, and balanced difficulty progression.
* Developed immersive game narrative and quest system architecture for enhanced player engagement and storyline progression.

SKILLS

Programming Languages
C# (Expert Level), JavaScript (Expert Level), C++, Java, GDScript, Odin, Rust

Game Development Technologies
Unity Engine (6+ Years), Godot Engine, Bevy Framework, raylib, Game Systems Architecture, Development Tool Creation

Software Development Methodologies
Object-Oriented Programming (6+ Years), Functional Programming Paradigms, Design Pattern Implementation, Data Structures and Algorithms, Software Architecture Design

Development Tools and Platforms
Visual Studio (6+ Years), Visual Studio Code (4+ Years), Git Version Control (4+ Years), GitHub (4+ Years), GitKraken (3+ Years)

Core Technical Competencies
Advanced Problem Solving, Code Analysis and Optimization, Debugging and Testing, Software Quality Assurance, AI-Assisted Programming

Professional Skills
Project Planning and Management, Technical Documentation, Team Collaboration, and Leadership

VOLUNTEERING/COMMUNITY

Discord Bot Development for Arab Godot Community
Developed and maintained Discord bot application for an Arabic-speaking Godot Engine developers community for 4 months, facilitating communication and resource sharing among developers in the region.

"Kun Awnan" Community Service Initiative
Volunteered with Arabian Culture Society's "Kun Awnan" community service event, organizing recreational activities for refugees family children during Eid Al-Adha celebrations, contributing to community welfare and cultural integration efforts.

Educational Event Organization
Organized a comprehensive five-day student lecture series featuring ten educational presentations with two daily sessions, demonstrating leadership in academic event planning and educational community engagement.

Community Social Events Coordination
Organized multiple family picnic events at Taman Tasik Cyberjaya Park, facilitating community building activities including recreational activities, group dining, and social interaction opportunities for local families.

LANGUAGES

Arabic: Native Speaker
English: Fluent (IELTS 6/9)
Japanese: Basic Conversational Level

INTERESTS

eSports: Following professional gaming tournaments and competitive gaming scene developments
Gaming: Passionate about analyzing game mechanics, design principles, and emerging trends in gaming industry
Anime: Exploring storytelling techniques and visual design methodologies in anime media
Open Source: Contributing to and maintaining open source projects within game development community
Paper Craft: Engaging in precision-based creative activities for stress management and attention to detail development
